This hand-on course of Introductory Agriculture Engineering is the prerequisite course for all future Agriculture Engineering courses. This course includes both the safety instruction and certification of equipment used in both metal and wood processes, drawing and designs and construction of various engineering projects used today with the Agricultural Industry.

Unit Title
Agricultural Technical Systems and Safety

Unit Summary
Agricultural mechanics provide important services to the agricultural industry. Agricultural mechanics must have the technical skills, aptitude, and ability to perform technical work using various systems and equipment. Skills are needed in several areas to perform various types of work, including carpentry, plumbing, electrical, and welding work and work on hydraulic and pneumatic systems, motorized power equipment, and sustainable energy systems. Before performing any type of work, agricultural mechanics must have a thorough understanding and the ability to successfully apply all safety procedures. Practicing proper safety procedures protects individuals from harm and properly and equipment from damage.

Unit Essential Questions:
1. How do I ensure that both I and my classmates are using safety precautions and practices while working in the shop?
2. What career interest do you have? What training or education is needed? What skills? Type of work involved? Is your interest a career for you?

Key understandings:
1. Safety and Health
2. Career opportunities
3. Agricultural student leadership organizations
4. Skills for employability

Focus Standards Addressed in the Unit:

<table>
<thead>
<tr>
<th>Standard Number</th>
<th>Standard Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPR.10.01.02.a</td>
<td>Examine career clusters and identify potential career opportunities based on personal interests, talents, goals, and preferences.</td>
</tr>
<tr>
<td>PST.02.02.02.b</td>
<td>Apply safety principles and applicable regulations to operate equipment, machinery, and power units used in AFNR power, structural and technology systems.</td>
</tr>
</tbody>
</table>

**Important Standards Addressed in the Unit:**

| CRP.10.02.02.a | Identify methods for setting goals for personal improvement and continuous growth in a career area. |

**Misconceptions:**

1. All careers need a 4-year college degree.
2. Safety is only a concern for those performing the work.

**Proper Conceptions:**

1. Jobs come with many different levels of education requirements. Many only need on the job training or a technical degree.
2. Agricultural accidents can affect all that are nearby whether they be chemical, fire, or mechanical.

**Knowledge & Concepts**

- Dangers in an agricultural mechanics shop and work place.
- Safety colors used on signs and icons in the agriculture industry
- Identify and use proper firefighting equipment
- Career opportunities

**Skills & Competencies**

- List safety procedures that promote avoidance of shop hazards and accident reduction
- Identify and demonstrate wearing of personal protective equipment.
- Demonstrate positive safety attitudes and responsibilities
- Demonstrate safety rules and regulations
- Describe regulations, safety and consumer protection
- Demonstrate first aid methods and procedures using supplies in a first aid kit
- Identify career pathways and education requirements

**Dispositions & Practices**

- Curiosity
- Learning to learn

**Academic Vocabulary:**

- Agriculture
- Portfolio
- Career objective
- Resume
- Networking
- Grounding
- Ground-fault circuit interrupter (GFCI)
- Lockout and tagout
- Occupational Safety and Health Administration (OSHA)
- Environmental Protection Agency (EPA)
- Personal protective equipment (PPE)
- Chemical hazard
- Spontaneous combustion
- Bonding
- First Aid
- Confined space
- carbon monoxide
- hazardous material
- NFPA hazard signal system
- Flammability hazard
- Hazardous Material Identification Guide (HMIG)
- Asbestos
- Blood borne pathogen
- Electrical shock
Assessments:
- Test
- Quizzes
- Participation
- Check points

Differentiation:
- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

Interdisciplinary Connections:
- This unit introduces many of the different agricultural systems found in industry. In all of those industries safety is the most important thing. Students can use skills learned in this unit for everyday life in the aspects of safety. Also as they progress through their high school career they will need to make choices about career opportunities.

Additional Resources:
- Video clips
- Articles
- Personal Accounts
- Agricultural Technical Systems and Mechanics Textbook

**Grade Level Summary**

This hand-on course of Introductory Agriculture Engineering is the prerequisite course for all future Agriculture Engineering courses. This course includes both the safety instruction and certification of equipment used in both metal and wood processes, drawing and designs, and construction of various engineering projects used today with the Agricultural Industry.

**Grade Level Units**

<table>
<thead>
<tr>
<th>Unit Title</th>
<th>Tools and Equipment</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Unit Summary</strong></td>
<td>Most, if not all, tasks in agricultural environments require the use of hand tools, portable power tools, and stationary power tools. Proper use of tools requires that an agricultural mechanic know how the tool is to be used for specific task, how the tool is to be maintained, and how the tool is to be stored. An agricultural mechanic must also have an understanding of protective equipment requirements and when to take a tool out of service and replace it with a new tool.</td>
</tr>
</tbody>
</table>

**Unit Essential Questions:**

1. How do tools affect your everyday life? Do they make task easier to complete? What tools have you used today?

**Key Understandings:**

1. Hand tool and power tool identification
2. Safe use and handling of power tools
3. Safe use of stationary power equipment
4. Proper use of all tools and equipment

**Focus Standards Addressed in the Unit:**

<table>
<thead>
<tr>
<th>Standard Number</th>
<th>Standard Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PST.02.02.02.b</td>
<td>Apply safety principles and applicable regulations to operate equipment, machinery, and power units used in AFNR power, structural and technology systems.</td>
</tr>
<tr>
<td>CS.03.04.</td>
<td>Use appropriate protective equipment and demonstrate safe and proper use of AFNR tools and equipment.</td>
</tr>
</tbody>
</table>
Identify the tools, machines and equipment needed to construct and/or fabricate a project in AFNR.

**Important Standards Addressed in the Unit:**

<table>
<thead>
<tr>
<th>Misconceptions:</th>
<th>Proper Conceptions:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Tools can be used however they see fit, for any job.</td>
<td>1. Tools are designed to perform certain task and can cause serious injury if used improperly.</td>
</tr>
</tbody>
</table>

**Knowledge & Concepts**

- Identification of hand tools and power tools and their uses
- Various gauges and testers used in agricultural power equipment

**Skills & Competencies**

- Describe regulations, safety and consumer protection.
- Identify, select, adjust, maintain and safely use common hand tools and power tools
- Demonstrate proper and safe use of air operated equipment
- Adjust, maintain and safely use electrical powered shop equipment
- Demonstrate accurate use of measurement devices and techniques for calculating measurement including the metric system

**Dispositions & Practices**

- Curiosity

**Academic Vocabulary:**

- Hand tool
- Level surface
- Tap
- Die
- Jointing
- Whetting
- Belt sander
- Finish sander
- Pneumatic nailer
- Powder-actuated tool
- Power load
- Center point test

- Circular saw
- Jigsaw
- Reciprocating saw
- Drill bit
- Hammer drill
- Rotary hammer
- Impact wrench
- Power screwdriver
- Portable power plane
- Portable power router

- Radial arm saw
- Table saw
- Miter saw
- Chop saw
- Band saw
- Drill press
- Lathe
- Grinder
Assessments:

- Test
- Quizzes
- Participation
- Check points

Differentiation:

- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

Interdisciplinary Connections:

- After learning all the types of tool, power tools and equipment students can then determine the proper tool for the job at hand. Through this they develop problem solving skills which they can use in all classes and life. They can use the tools to make their job easier. Knowing the operation or the use of the tool is important to do the job properly and keep having an accident.

- Unit 8: Electrical and Plumbing systems
- Unit 9: Agricultural Structures and Maintenance

---

**Unit Title**

Materials and Fasteners

**Unit Summary**

Material selection is an important part of component design and repair. Materials and their properties determine size, shape and thickness a component needs for its intended function. Materials commonly used are wood, metal, and plastics. Fasteners are components used for attaching parts in an assembly. Fasteners are available in a variety of material types. Having knowledge about common materials and their associated fasteners aids the agricultural mechanic in fabrication and repair of equipment.

**Unit Essential Questions:**
1. Why is it important to select correct material and fasteners when constructing a project?

**Key Understandings:**
1. Lumber selection and application
2. Metal selection and application
3. Fastener identification and application

**Focus Standards Addressed in the Unit:**

<table>
<thead>
<tr>
<th>Standard Number</th>

<td></td>
</tr>
</tbody>
</table>

Academic Vocabulary:

- Lumber
- Plain-sawn lumber
- Quarter-sawn lumber
- Warpage
- Crown
- Bow
- Twist
- Cup
- Metal
- Alloy
- Ferrous metal
- Cast iron
- Adhesive bonding

- Carbon steel
- Galvanized steel
- Nonferrous metal
- Aluminum
- Copper
- Magnesium
- Tensile strength
- Machinability
- Plastic
- Thermoplastic
- Thermoset plastic
- Rivet
- pin

- Fastener
- Threaded fastener
- External thread
- Internal thread
- United Thread Standard (UTS)
- Wood screw
- Bolt
- Nut
- Washer
- Non Threaded fastener
- Nail
- Wire brad
- staple

Assessments:

- Test
- Quizzes
Differentiation:

- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

Interdisciplinary Connections:

This unit talks about the differences between material and fasteners. Being able to determine the proper use and strength of the material or fastener being used is important. The ability to choose correctly requires critical thinking and problem solving. Students can use these skills in a variety of different courses when they are faced with a problem and have a plethora of choices to solve it with. They can determine the best solution through critical thinking and problem solving. These are skills that will be vital in life as well.

# Intro to Agriculture Engineering

## Grades 9-12

### Unit #4

<table>
<thead>
<tr>
<th>Course/Subject: Introduction to Agriculture Engineering</th>
<th>Grade: 9-12</th>
<th>Unit 4: Concrete and Masonry Construction</th>
<th>Suggested Timeline: 2 weeks</th>
</tr>
</thead>
</table>

## Grade Level Summary

This hand-on course of Introductory Agriculture Engineering is the prerequisite course for all future Agriculture Engineering courses. This course includes both the safety instruction and certification of equipment used in both metal and wood processes, drawing and designs, and construction of various engineering projects used today with the Agricultural Industry.

## Grade Level Units

- Unit 1: Agricultural Technical Systems and Safety
- Unit 2: Tools and Equipment
- Unit 3: Materials and Fasteners
- Unit 4: Concrete and Masonry Construction
- Unit 5: Welding, cutting, and joining processes
- Unit 6: Agricultural Power and Machinery
- Unit 7: Project Design
- Unit 8: Electrical and Plumbing systems
- Unit 9: Agricultural Structures and Maintenance

## Unit Title

Concrete and Masonry Construction

## Unit Summary

Concrete and masonry construction is a necessary task for most agricultural business and facilities. An agricultural mechanic should have a thorough understanding of the chemical, mechanical, and physical properties of concrete and masonry materials. Concrete and masonry construction is used in agricultural applications for both new construction and repair work.

## Unit Essential Questions:

1. Think around you, what would your world and everyday life be without concrete?

## Key Understandings:

1. Concrete and mortar makeup
2. Concrete principles
3. Concrete calculation formula
4. Bill of materials

---

## Focus Standards Addressed in the Unit

<table>
<thead>
<tr>
<th>Standard Number</th>
<th>Standard Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PST.04.03.06.b</td>
<td>Calculate volume for concrete projects</td>
</tr>
<tr>
<td>PST.04.03.06.a</td>
<td>Summarize the characteristics of the components found in concrete</td>
</tr>
</tbody>
</table>
Analyze a project plan to prepare a bill of materials and an estimate of material costs.

## Important Standards Addressed in the Unit:

### Misconceptions:

<table>
<thead>
<tr>
<th>Misconceptions</th>
<th>Proper Conceptions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Concrete is cured once it is hard.</td>
<td>1. Concrete takes 28 days to fully cure.</td>
</tr>
<tr>
<td>2. Concrete and mortar are the same.</td>
<td>2. Concrete has aggregate in it and mortar does not.</td>
</tr>
</tbody>
</table>

## Knowledge & Concepts

- Concrete calculations
- Composition of concrete and mortar
- Pouring and working concrete
- Cure time for concrete and mortar

## Skills & Competencies

- Read work order, instructions, formulas or processing charts
- Calculate volume needed for a project
- Lay block and brick
- Finish concrete
- Determine bill of material for project and all materials included

## Dispositions & Practices

- Persistence

## Academic Vocabulary:

- **Concrete**
- **Cement**
- **Aggregate**
- **Hydration**
- **Admixture**
- **Load-bearing capacity**
- **Groundwork**
- **Excavating**
- **Sloping**
- **Benching**
- **shoring**

- **foundation**
- **screeding**
- **joint control**
- **floating**
- **troweling**
- **wythe**

- **Masonry**
- **Trowel**
- **Jointer**
- **Brick hammer**
- **Brick set**
- **Line**
- **Brick**
- **Concrete masonry unit (CMU)**
- **Mortar**
- **Course**
- **Plasticity**
- **bond**

## Assessments:

- Test
- Quizzes
- Participation
- Check points
- projects

## Differentiation:

6/29/17 – PAGE 11
- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

**Interdisciplinary Connections:**
- The masonry and concrete unit requires mathematical calculations to determine amounts and ratios. These calculations involve finding area and volumes. There is also a science connection when it comes to the chemical makeup of concrete and mortar. Students can use their knowledge of other subjects to help them relate the information to real life situations.

Compare and contrast the principles and procedures of different welding and cutting processes.

### Important Standards Addressed in the Unit:

<table>
<thead>
<tr>
<th>Misconceptions:</th>
<th>Proper Conceptions:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. When welding you touch the metal to metal to bond it.</td>
<td>1. Welding is done through an electric arc between two metals that super heats the metal while adding a filler metal to the bead.</td>
</tr>
</tbody>
</table>

#### Knowledge & Concepts
- Identify and select various types of metals
- Identify and select various types of welding and cutting equipment including oxyacetylene and plasma arc.
- Adjust or set mechanical controls or components
- Three types of welding processes
- Job-site safety procedures
- Welding terminology
- Oxyfuel cutting process
- Identification of shielded metal arc welding, gas metal arc welding, flux core arc welding, gas tungsten arc welding
- Plasma arc cutting process
- Destructive testing techniques of welds
- Nondestructive examination process of welds
- Resistance welding processes

#### Skills & Competencies
- Select, adjust, operate and maintain oxy-fuel equipment with and without filler rods
- Identify and weld various joints to include fillet butt joint, vertical tee joint, double bevel joint and fillet tee joint.
- Use soldering equipment
- Fabricate a product by hand
- Repair sheet metal products
- Produce welds using stick and wire style welders.
- Ignite and adjust OAW torch
- Demonstrate safety precautions when handling oxygen and acetylene cylinders
- Assemble OAW equipment
- Explain the various types of electrode transfer used in GMAW

#### Dispositions & Practices
- Critical thinking
- Problem solving

### Academic Vocabulary:
- Welding
- Fabricate
- Oxyfuel welding
- Arc welding
- Resistance welding
- Weld bead
- Crater
- Weld reinforcement
- Root face
- Oxyfuel welding
- Oxyacetylene welding
- Welding torch
- Neutral flame
- Soldering
- Capillary action
- Brazing
- Brazing welding
- Weld joint
- Shielded metal arc welding
- Gas metal arc welding
- Short circuit transfer
- Globular transfer
- Spray transfer
- Flux-cored arc welding
- Gas tungsten arc welding
- Plasma arc cutting
- Resistance welding
<table>
<thead>
<tr>

<th>Filler metal</th>
</tr>
</thead>
<tbody>
<tr>
<td>Weld type</td>
<td>Fillet weld</td>
<td>Groove weld</td>
<td>Handfeed welding</td>
</tr>
<tr>
<td>Projection welding</td>
<td>Destructive test</td>
<td>Nondestructive examination</td>
<td>Flash welding</td>
</tr>
</tbody>
</table>

### Assessments:
- Test
- Quizzes
- Participation
- Check points
- Projects

### Differentiation:
- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

### Interdisciplinary Connections:
- Students will need to follow step by step procedures in order produce an arc and lay down a bead. In order for the weld to be strong student will use problem solving skills to determine metal type, thickness and type of gas being used. From there they need to determine the wire speed and voltage needed to make a strong weld. From these students will gain problem solving skills and critical thinking when determining the best setup to weld. They will also gain hand eye coordination in order to produce a quality weld.

- Unit 6: Agricultural Power and Machinery
- Unit 7: Project Design
- Unit 8: Electrical and Plumbing systems
- Unit 9: Agricultural Structures and Maintenance

### Unit Title
**Agricultural Power and Machinery**

### Unit Summary
In this unit students will introduced to the type of equipment and machinery that is used to perform work in an agricultural setting. Most machinery is internal combustion engines that require gasoline or diesel fuel. An agricultural mechanic must have an understanding of these principles as well as proper equipment maintenance practices. Due to depletion of fossil fuels, sustainable energy resources are being developed to help agricultural operations for the future.

### Unit Essential Questions:
1. What ramifications could there be if machinery and equipment are not used proper or maintained properly?

### Key Understandings:
1. Work, power, and Torque principles
2. Agricultural equipment maintenance
3. Engines and mobile power equipment
4. Sustainable energy resources

### Focus Standards Addressed in the Unit:

<table>
<thead>
<tr>
<th>Standard Number</th>
<th>Standard Description</th>

</tbody>
</table>

**Misconceptions:**

<table>
<thead>
<tr>
<th>Misconception</th>
<th>Proper Conception</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. You can operate equipment on a farm if you are under 16 years of age.</td>
<td>1. You may operate any piece of equipment on your families’ owned farm no matter of age. To operate equipment on a different farm you must have a safe tractor certification or your driver’s license.</td>
</tr>
</tbody>
</table>

**Knowledge & Concepts**

- Review operating and service manuals, and schedules; and, conduct procedures as needed
- Safety inspections in industrial, manufacturing or repair settings
- Identify and describe agricultural equipment and their operations
- Identify renewable and nonrenewable natural resources
- The historical development of agricultural power and systems technologies
- Various gauges and testers used in agricultural power equipment
- Select, measure, use and calibrate testing devices and the machines
- disassembly and assembly procedures
- Correct selection and use of agricultural machinery and equipment systems
- Auxiliary systems including hydraulics, pneumatics and electronics
- Troubleshooting procedures
- The parts and functions of specific energy systems to include electrical power, solar power, wind power, mechanical power and chemical/carbon-based power systems
- Identify and investigate emerging technologies and their economic impact on energy systems

**Skills & Competencies**

- Locate and use a repair manual to diagnose malfunctions of various agricultural equipment
- Test a vehicle to determine installation, service or repair needed.
- Service vehicle with water, fuel or oil
- Conduct training in product use
- Provide customer service needs
- Identify the various types of land uses
- Identify global applications of agricultural power and systems technologies
- Identify emerging technologies and their potential impact
- Identify methods of changing appropriate technology for various applications
- Adjust or set mechanical controls or components
- Move or fit heavy objects
- Select, connect, engage and operate machinery and power units
- Lubricate machinery, equipment or parts
- Test electrical/electronic wiring, equipment, systems or fixtures
- Repair or replace electrical wiring, circuits, fixtures or equipment

**Dispositions & Practices**

- Ethical judgment
- Curiosity
Appropriate industry standards for energy systems

Academic Vocabulary:

- Energy
- Force
- Horsepower
- Pressure
- Radiation
- Torque
- Work
- Gear
- Prime mover
- Hydraulic system
- Actuator
- Pump
- Hose
- Cylinder
- Pneumatic system
- Generator
- Converter
- Solar energy
- Photovoltaic system
- Pyrolysis
- Lubricant
- Bearing
- Mechanical drive system
- Belt drive
- Belt
- Slip
- Flat belt
- V-belt
- Standard belt
- Timing belt
- Chain drive
- Gear drive
- Sustainable energy resources
- Heat pump
- Heat sink
- Compressor
- Wind turbine
- Grid-connected wind energy system
- Stand-alone wind energy system
- Gasification
- liquefaction
- Small engine
- Gasoline engine
- Diesel engine
- Four-stroke cycle engine
- Two-stroke cycle engine
- Air-cooled engine
- Liquid-cooled engine
- Engine block
- Crankshaft
- Power take-off (PTO)
- Piston
- Connecting rod
- Valve
- Push rod
- Camshaft
- Turbocharger
- Carburetor
- Differential
- Fermentation
- Anaerobic digestion

Assessments:

- Test
- Quizzes
- Participation
- Check points

Differentiation:

- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

Interdisciplinary Connections:

- This unit involves the use and maintenance of machinery and equipment in the agricultural setting. Students will learn to care and maintain the equipment and machinery to keep it in good running condition. This mindset and ability to do so will transition over to the way they care for their own personal things. Students will learn to have a respect for property and the property of others. Science will be introduced when talking about the alternative energy sources that are being developed.

## Unit Title

Project Design

## Unit Summary

This unit will look at what goes into project planning. Project planning requires the ability to read and understand drawings, plans, prints and project specifications. Project planning also involves understanding estimates and bids for materials and processes. When planning for a project whether it be for a building or land conservation, surveying is a necessary step in the process.

## Unit Essential Questions:

1. Why is the project design the foundation of any build?
2. How do you read and interpret blueprints and schematics?

## Key Understandings:

1. Project Planning
2. Surveying

## Focus Standards Addressed in the Unit:

<table>
<thead>
<tr>
<th>Standard Number</th>
<th>Standard Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PST.04.01.01.a</td>
<td>Interpret and explain the meaning of symbols used in sketches of agricultural structures.</td>
</tr>
<tr>
<td>PST.04.01.02.a</td>
<td>Read and interpret the parts and/or views of plans for agricultural structures.</td>
</tr>
<tr>
<td>PST.04.01.01.b</td>
<td>Apply scale measurement and dimension to develop sketches of agricultural structures.</td>
</tr>
</tbody>
</table>
Important Standards Addressed in the Unit:
PST.04.02.01.c Create a project cost estimate, including materials, labor and management for and AFNR structure.

<table>
<thead>
<tr>
<th>Misconceptions:</th>
<th>Proper Conceptions:</th>

<td>Request for proposal</td>
<td>Global positioning system</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Geographic information system</td>
</tr>
</tbody>
</table>

Assessments:

- Test
- Quizzes
- Participation
- Check points
- projects
Differentiation:

- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

Interdisciplinary Connections:
- This unit has a strong connection to math and technical drawing. Students will use their math skills to determine things like slope and angles when surveying. They will also need math skills to scale down measurements for their drawings and layout work.

Additional Resources:
- Video clips
- Articles
- Personal Accounts
- Agricultural Technical Systems and Mechanics Textbook

Created By:
Troy Summey
## Grade Level Summary

This hand-on course of Introductory Agriculture Engineering is the prerequisite course for all future Agriculture Engineering courses. This course includes both the safety instruction and certification of equipment used in both metal and wood processes, drawing and designs, and construction of various engineering projects used today with the Agricultural Industry.

## Grade Level Units

- Unit 1: Agricultural Technical Systems and Safety
- Unit 2: Tools and Equipment
- Unit 3: Materials and Fasteners
- Unit 4: Concrete and Masonry Construction
- Unit 5: Welding, cutting, and joining processes
- Unit 6: Agricultural Power and Machinery
- Unit 7: Project Design
- Unit 8: Electrical and Plumbing systems
- Unit 9: Agricultural Structures and Maintenance

## Unit Title

### Electrical and Plumbing systems

## Unit Summary

In this unit, students will be introduced to the principles of electricity and plumbing. They will design and wire up electrical circuits. They will also look at various aspects of plumbing including copper, pex, and pvc piping.

## Unit Essential Questions:

1. How does knowing basic plumbing and electrical systems help you when you become a homeowner?

## Key Understandings:

1. Plumbing safety
2. Plumbing systems
3. Electrical systems
4. Electrical safety
5. Electrical components
6. Plumbing and electrical codes

## Focus Standards Addressed in the Unit:

<table>
<thead>
<tr>
<th>Standard Number</th>
<th>Standard Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PST.04.04.02.c</td>
<td>Plan and wire electrical circuits</td>
</tr>
<tr>
<td>PST.04.03.04.c</td>
<td>Install and/or repair pipes and plumbing equipment and fixtures in AFNR structures</td>
</tr>
</tbody>
</table>
PST.04.03.04.a  Compare and contrast the characteristics of materials used in plumbing and water systems.

PST.04.04.02.a  Distinguish electrical circuits and the components of each.

### Important Standards Addressed in the Unit:

**Misconceptions:**

1. Voltage is what kills you when dealing with electricity.

**Proper Conceptions:**

1. The amperage is what actually causes death with electricity. .01 amps can stop your heart.

### Knowledge & Concepts

- Electrical codes
- Plumbing codes
- Ohm’s law
- Irrigation systems
- Renewable and nonrenewable natural resources.
- various types of land uses

### Skills & Competencies

- Use computers to enter, access, or retrieve data.
- Prepare a technical report
- Identify emerging technologies and their potential impact
- Identify methods of changing appropriate technology for various applications
- Demonstrate positive safety attitudes and responsibilities
- Describe regulations, safety and consumer protection
- Demonstrate accurate use of measurement devices and techniques for calculating measurement including the metric system
- Read blueprints and schematics
- Read work order, instructions, formulas or processing charts
- Identify the parts and functions of specific energy systems to include electrical power, solar power, wind power, mechanical power and chemical/carbon-based power systems
- Identify and investigate emerging technologies and their economic impact on energy systems
- Explain appropriate industry standards for energy systems

### Dispositions & Practices

- Curiosity

### Academic Vocabulary:

- Plumbing system
- Water main
- Water cycle
- Soil moisture
- Generator
- Conductor
Assessments:
- Test
- Quizzes
- Participation
- Check points
- projects

Differentiation:
- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

Interdisciplinary Connections:
- This unit connects very well to science and math courses. Students will look at Ohm’s law and have to do calculations to determine certain aspects of electricity. They will also learn about atoms, voltage, energy, etc. The connection to math and science will be strong in this unit. They will use their English skills to read plumbing and electrical codes that are required when building.

This hand-on course of Introductory Agriculture Engineering is the prerequisite course for all future Agriculture Engineering courses. This course includes both the safety instruction and certification of equipment used in both metal and wood processes, drawing and designs, and construction of various engineering projects used today with the Agricultural Industry.

Grade Level Units

Unit 1: Agricultural Technical Systems and Safety
Unit 2: Tools and Equipment
Unit 3: Materials and Fasteners
Unit 4: Concrete and Masonry Construction
Unit 5: Welding, cutting, and joining processes
Unit 6: Agricultural Power and Machinery
Unit 7: Project Design
Unit 8: Electrical and Plumbing systems
Unit 9: Agricultural Structures and Maintenance

In this unit, students will learn about the many different type of structures made from a variety of materials are used in agricultural settings. The type of building method used and the type of structure depend on the farmstead plan and layout. Common agricultural structures include pole barns, out buildings, poultry barns and greenhouses. Specialized structures include hydroponic structures, which are built to utilize maximum energy efficiency.

Unit Essential Questions:
1. What considerations must go into planning a building?
2. How do these considerations affect the building process?

Key Understandings:
1. Building methods and structures
2. Building and energy efficiency
3. Fencing

Focus Standards Addressed in the Unit:

<table>
<thead>
<tr>
<th>Standard Number</th>
<th>Standard Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PST.04.03.01.c</td>
<td>Select materials for a project based upon an analysis of the project and the quality of the materials.</td>
</tr>
</tbody>
</table>

Important Standards Addressed in the Unit:
Assess and analyze local building code requirements for agricultural structures.

<table>
<thead>
<tr>
<th>Misconceptions:</th>
<th>Proper Conceptions:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Buildings can be placed anywhere you need them any time.</td>
<td>1. There are local ordinances that mandate what you can and cannot do on your property.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Knowledge &amp; Concepts</th>
<th>Skills &amp; Competencies</th>
<th>Dispositions &amp; Practices</th>

**Academic Vocabulary:**

- Farmstead plan
- Windbreak
- Footing
- Greenhouse
- Hydroponic structure
- Aquaculture
- Prefabricated building
- Building science
- Heat transfer
- Conduction
- Convection
- Radiation
- Vapor barrier
- Perm rating
- Thermal insulation
- Weather stripping
- Fence
- Perimeter fence
- Cross fence
- Wire fence
- Barbed wire
- Electrical fence
- Electric wire
- Wire fabric fence
- Rail fence

**Assessments:**

- Test
- Quizzes
- Participation
- Check points
- Projects

**Differentiation:**
- Book work
- Lecture
- Demonstrations
- Video clips
- Hands on learning
- IEP accommodations

**Interdisciplinary Connections:**
- This unit looks at the building of structures in the agricultural setting. Students will use their math skills to measure and compute numbers.
